HOW
 THESE
 TWINS
 WERE
 BROUGHT
 UP ON
 A RAFT

THE TWINS ON THEIR RAFT HAULED UP IN THE BACK YARD WHAT FRESH AIR AND PURE FOOD DID FOR TWO

THE TURNER TWINS ON THEIR RAFT MOORED OUT IN THE RIVER

FEEDABLE BABIES

London, June 28.
 THE Turner twins were feeble. They were underweight when they were born, and no amount of care and coddling seemed to avail. Eric, weighed less than his twin brother Jack, and they pretty well despaired of raising him. Time went by and the friends and neighbors of the Turners culled with advice, medicines, concoctions of foods and suggestions, and they tried them all. Jack was building his own, but Eric was losing ground.

Then Mr. Percy Turner, the father of the twins, decided to make a radical move. Living in the famous town of Wallingford, on the bank of the Thames River, near London, an idea struck him: he would bring up the youngsters on a raft. He would anchor them out from the shore away from dust, dirt and creeping bugs and insects. And at the same time he would be done with the noxious and remedies of kindly neighbors. He would see that the little ones were fed good, pure milk, and a varying diet of the many cereals which he had tried on his own breakfast table.

"Pure air and pure food," said Mr. Turner to the writer, "was my motto. If they could get enough of both I was sure the twins would pull through. So I set to work and made them this raft. We tied a cord to the belt of each baby and fastened the ends to staples driven into the raft. In

(Continued on Page 12)

"What it means to march through miles of snow half way up to one's knees * * * and carry one's provisions on one's back."

"To make one's way through a forest of snow trees, in every landmark obliterated by snow, to ford frozen rivers."

With the ice-bound wastes of Labrador were taken a woman.

To investigate the death of the husband she loved, Mrs. Leonidas Hubbard, widow of the dead explorer, will brave the dangers of miles upon miles of freezing, trackless forests. She will travel through a wilderness of west and east and will try to penetrate to the port of her own life, the mystery of her husband's death.

"Death by starvation" was the message and horrible news sent out to the world as to the fate of the young explorer in October of the year 1902.

He had been gone since the month of July. Accompanied by Dillon Wallace and George Ekos, a half-breed Indian guide, Leonidas Hubbard, Jr., had set out for the west of North Labrador, determined to be the first white man to describe the land of the Nascaup Indians.

The news of this young explorer's untimely fate shocked his friends unutterably. His widow absolutely refused to believe it. "Mr. Hubbard is safe," she announced in the newspapers, "and will come out all right. He is brave and robust and never gives up."

In an agony of impatience, now overwhelmed with fear that the horrible news was true, again, hoping against hope, the explorer's wife waited and waited for absolute confirmation from those who had survived. It came at last—reassuring and inevitable. It came in two telegrams from Dillon Wallace, in an advertisement in *Campy Whittier*, editor of the *Dilling Magazine*, of which Mr. Hubbard was associate editor, and in an other to his sister, Miss Wallace.

The News Prostrated Her.

The explorer's widow collapsed completely under the shock. She had kept up as long as there was a vestige of hope, until the moment when she received the last words of her dying husband: "I think death from starvation is not so bad—I am prepared."

In May of 1904, nearly two years after he had succumbed inevitably, "I am just going to look up a tribe of Indians in the North who are waiting to be discovered," the body of Explorer Hubbard was returned to his wife for burial.

"Death from starvation." Mrs. Hubbard brooded over those words for months. "He was so brave and patient, and never gave up," she kept repeating. Mr. Capner Wallace and Mr. Moore, both Arctic explorers, described themselves completely mystified by the effort, thinking they never for a moment doubted that everything possible had been done to save the life of the explorer.

"I cannot believe," said Mr. Morris, "that Mr. Hubbard could have starved at the season of the year he is reported to have died, unless he met with personal injury."

According to Mr. Whitney: "Twelve miles from where Hubbard made his last camp there were three pounds of flour, twenty-five or twenty-six miles further was the head of Grand Lake and Leonard Shaw's gold mine. And it was less than forty miles from the cache in the wealth and plenty of North-west River, from where they had all started."

"Why should he have starved? Why? Why?" This question the explorer's widow repeated to herself over and over. Every scrap of information she could gather she placed to pieces to try to satisfy herself that the cause of her husband's

What Does Mrs. Hubbard Expect to Find?

to the Unknown and the Icy Wilds of Labrador, Accompanied Only by a Halfbreed Indian Guide, to Solve the Mystery of His Death.

Mrs. Leonidas Hubbard.

death was clear, deeper and still deeper seemed to her to grow the mystery with every day.

During this time Mr. Wallace published a book, "The Land of the Labrador Wilds," in which he questioned the judgment of the late explorer in plunging into an unexplored region with only adequate and meagre provisions.

This statement ungenerously fired Mrs. Hubbard in indignation. How could any man dare to doubt her husband's judgment? At once she seemed to see in Dillon Wallace an enemy. She loved that he was preparing to make a second expedition to the land of ice and bleak barrenness, where her husband had met his death. At once there flew into her mind the project to journey there, too. She was a woman, but what of that? Why should she be deterred by her loss and frozen trails. Her husband had braved them and so would she. She was vigorous and strong and young and determined.

No wonder had Dillon Wallace left New York on his second

"We had been eating the entrails and every scrap that could be eaten of the fish and game we killed."

expedition than Mrs. Hubbard prepared to follow him. She had made up her mind that there was some mystery in her husband's death that she alone could fathom. The belief that he was a genius is absolute. She insists that he could not have made a mistake.

For women's heart on wondering if everything possible had been done to save her unfortunate husband, she is now on course for the Labrador coast. On the steamer *Harlow*, she has sailed for Gilliguet. With her is George Ekos, the half-breed Indian guide, who accompanied Mr. Hubbard, the man of all the world who can conduct his widow to the spot where the explorer lost his life.

For some time it was believed that Mrs. Hubbard's expedition was intended as an attempt to finish the work her husband had begun. Later it crept out that she had gone to gather evidence of his death.

To get this evidence, she must penetrate into the region which cost her husband his life, a region from which he wrote the most harrowing notes of suffering and privation that may be imagined. At one time:

THE NEW GREAT CITY OF 100,000 CONSUMPTIVES THE RELIGIOUS AND FRATERNAL CITY FROM TUBERCULOSIS WITH NEW MEXICO

Copyright, 1908, by the

CONSUMPTION kills more people every year than any other disease and yet it is not only curable, but can be prevented. Treatise who are well-to-do have no business to have tuberculosis at all. It is not generated in that class, but is conveyed to them, it is society's harmful gift to society.

Life in the open air with pure and nourishing food is now well known to be the cure for consumption. This remedy is always within the reach of the wealthy, but not easy for the poor. And it is to provide outdoor life and abundance of interesting food to the victims of tuberculosis among the poor that a great open-air city for consumptives has been established. From all parts of the United States consumptives are invited; the position will be given a home in the open air, with food free, those who are able to pay will be required to pay the exact cost of the food, but no more.

Paternal City is the combined property of 100 of the great religious and fraternal orders and societies of the United States. Church societies, Sunday schools, missionary societies, the Masons, the Oddfellows, the Workmen and hundreds of other fraternal orders are united in the organization of what is known as the National Fraternal Foundation. These combined societies represent more than 3,000,000 fraternalists and they have accepted a free gift of 30,000 acres of land from the city of Las Vegas, New Mexico, and there they have established Paternal City.

In the center of this great piece of land the Santa Fe Railroad has already built the Montezuma Hotel, a cost of half a million dollars and has spent another half million in electric light, plant, baths and improvements. All this has been donated free to the fraternalists by the Santa Fe Railroad.

Paternal City thus makes its appearance suddenly on the map without a dollar of expense. It is proposed to tax each one of the 3,000,000 members of these societies one cent a month. This will yield \$300,000 a year to pay the running expenses of Paternal City. The great hotel will be used for visitors and friends of the patients, but the consumptives themselves will live in the cottages all over the neighboring hills and valleys. The cottages, each of which are being built out by Colonel P. H. Hunsaker, U. S. Army, a military engineer. These ranges are being placed at various elevations for the purpose of giving each case treatment in the most favorable altitude.

Eighty Per Cent Cured in Two Years.

By next Fall, when Paternal City will be formally dedicated and opened, provisions will have been completed for the reception of 2,000 patients. This number is to be increased indefinitely as rapidly as funds are available. This is made possible by the fact that to the delightful Rio Arriba region of New Mexico, the National Fraternal Foundation has become possessed of almost 30,000 acres of cultivated land at an average elevation of 5,000 feet, every acre of which meets the requirements of Paternal City. In the center of the tract stands the Montezuma Hotel. The hotel is of brick and stone, four stories high, and has 200 fully appointed rooms and baths. There are 750 feet of veranda, which commands the valley.

The gift of the Santa Fe also includes a smaller hotel, a fully equipped dairy, a chicken ranch, a bull ranch, a horse ranch, and steam heating plants, as well as a modern kitchen, a surgical hospital, a convalescent ward and recovery, a fully able and cattle barn, and 1,000 acres of land, which the city of Las Vegas, has been donated absolutely free to the consumptives, provided that it be used for no other purpose than benefit patients.

The headquarters of the consumptive management is in St. Louis, Missouri, where the National Fraternal Foundation is located. William H. Hunsaker, president of the National Fraternal Foundation, is president of the consumptive management. Dr. Hunsaker is the secretary of the religious department of the National Fraternal Foundation. Dr. Hunsaker is the manager of the American Baptist Publication Society.

The new consumptive management is to be a new ownership plan with profits accruing to no one. There are no bonds to be issued on the public, or glittering investments to be made. The consumptive management is to be a new ownership plan with profits accruing to no one. There are no bonds to be issued on the public, or glittering investments to be made. The consumptive management is to be a new ownership plan with profits accruing to no one. There are no bonds to be issued on the public, or glittering investments to be made.

Sleep with Your Head Out the Window.

It will require an expenditure of \$75,000 to put Paternal City in proper shape for the reception of patients, a price which is already being covered in small amounts. Each fraternalist of Paternal City is fully equipped, the business and correspondence will be conducted from the consumptive headquarters, situated in St. Louis, Mo.

It is expected that within a few months there will be 100,000 consumptives in the hills and valleys of Paternal City. It has been estimated that 80 per cent of the consumptives who reach this city will be cured. The consumptives who reach this city will be cured. The consumptives who reach this city will be cured. The consumptives who reach this city will be cured.

While the various fraternal orders expect to take care of the greater part of their affected members in this open-air sanitarium, there are many people suffering from tuberculosis who are so situated that it is impossible to leave home and families and go there. For these there can be done in their own homes. Fact, however, cannot be so far removed from actualities as to claim that the consumptive management is to be a new ownership plan with profits accruing to no one. There are no bonds to be issued on the public, or glittering investments to be made.

Panoramic view of "Fraternal City" in New Mexico, showing the Montezuma Hotel, where friends and visitors of the consumptives will stay.

On the hills and in the valleys thousands of consumptives will live in tents at the expense of the great religious or fraternal orders of America; or paying their own way at the actual cost of living.

Wicked Government Scientists

How the Womens Christian Temperance Union Have Told the Agricultural Experts they Ought to be Ashamed of Themselves for Telling American Farmers How to Grow Opium.

WICKED Government Scientists! What do you think they are actually doing now?

Nothing again! Teaching the farmers to raise it! Experimentally? Yes; but the object of the experiment is to find out whether or not the drug can be successfully produced on a commercial scale in this country.

But such a thing is not to be permitted if some people can prevent it. Already the Womens Christian Temperance Union is up in arms, having been apprised of the scheme in contemplation, and thousands of letters from all parts of the country are reaching the Department of Agriculture at Washington, demanding that the project shall be abandoned. "Infamous!" say the ladies of the W. C. T. U. "Is this Government to be allowed to engage in an enterprise calculated to foster among the American people a hideous and abominable Asiatic vice? Not, you may well believe, if we can help it!"

Poppy Plant in Full Bloom, with Opium Ripe for Extraction.

The W. C. T. U., through the powerful influence it was able to bring to bear upon Congress, wiped out the army ration. Efforts even stronger, if required, will be made to stop this new evil in the East. The Secretary of Agriculture is authorized at the request of the national association of the soldier, as evidenced by the letters that are pouring in upon him from all parts of the country. "A disease in our country," "You ought to be ashamed of yourselves," "It is bad enough to see the official stamp of approval on the manufacture of rum and wine without encouraging the opium habit." And many other denunciations equally as strong are being registered by the energetic and angry members of the W. C. T. U., who are thoroughly determined to kill our new Asiatic industry.

Old Age of Government Policies.

Meanwhile a considerable patch of opium poppies, covering about an acre of land, is already in bloom in southern Texas, under Government auspices, and some time in August the crop will be gathered, the deadly gum obtained from the seed pods of the plants being so manipulated as to convert it into the opium of commerce. Incidentally, experiments will be made in the manufacture of laudanum from the opium, and morphine, that dangerous and destructive alkaloid, will be extracted.

Inasmuch as immense quantities of opium are consumed annually in this country, all it imported from India and China, it has occurred to the Department of Agriculture that the drug might as well be produced in the United States for the benefit and profit of our farmers. It is with this idea that the experiment in question have been undertaken, and not with the notion of encouraging the consumption of the drug among the American people. The only question from Secretary Wilson's point of view is whether opium can be grown as cheaply here as in Asia, where planters engaged in the industry have the advantage of experienced labor. But he thinks that intelligent methods and labor-saving machinery will enable the American farmer to compete with his Asiatic rival—especially with the help of the high tariff on the imported article.

Going to Extract Morphine, Too.

In India and China opium has been produced in the same old way for centuries; but in taking up the business our government purposes to introduce radical improvements from the outset. In the first place, there must be some better way to collect the gum from the seed pods than to wait on the ground and perform a surgical operation on each pod with a special knife, gathering upon a leaf the few drops of juice that exude, and repeating the process every day or two for a fortnight. Professor B. T. Callaway, of the Department of Agriculture, who has charge of the experiment, has found it much more satisfactory to reap the poppy crop with a reaping machine, throw seed, pods, and stalks into a retort, and separate the opium from them by a simple process of distillation.

Testing the Opium in the United States Government Plant Pathological Laboratory.

Thus far only a beginning has been made, but it is expected that, while the method of growing the poppies as practiced in Asia may not be susceptible of improvement, an exact and scientific process for obtaining the opium from the plants will soon be evolved. The plan adopted in India and China is to sever the leaves of a large part of the gum, where, as by distillation every bit of it is separated from the plant.

Opium is the most complex of organic substances, and up to the present time chemists have succeeded in obtaining from it nearly one hundred distinct "active principles." Of these active principles, or alkaloids, the best known is morphine—a substance which, while dangerous when misused, is justly to be regarded as one of the greatest blessings bestowed upon mankind. It is the arch pain-killer, and makes easy the path to death for many a sufferer who would otherwise undergo indescribable agonies in passing out of life.

It is important, therefore, to make note of the fact that the government experts have never discovered a process by which morphine may be extracted directly from the seed pods of the poppies, instead of from the opium, as heretofore. Just how this is accomplished will not be known until, within a few months of the present time, the secret is made public in a bulletin of the Department of Agriculture.

Curing Morphine Habit With Opium.

It may be said incidentally that the morphine habit once acquired is far more destructive than the smoking or eating of opium. To a large extent this alkaloid is used by hygienic injection—a highly regulated dose, which soon cures the nervous system, and, if pursued, inevitably causes death within half a dozen years at the most. Not very long ago an enterprising "foreign devil," with "M. D." packed in his name, established himself in business in the city of Canton, in China. He advertised to cure the opium habit, and many people who were victims of the drug came to him for treatment. By lease and bonds he practiced greed, because it was found that the seed pods which he sold at a high price took away the craving for opium. Not that he had accumulated a big fortune; he discovered that the pills in question were loaded heavily with morphine—a recognized source of the enterprise of the "foreign devil" being that thousands of unfortunate persons became addicted to a vice far more than the one they had been so anxious to get rid of.

All sorts of the poppy plant contain opium, though it is the milky juice of the seed pod that is most rich in the substance. The seeds (in India) are planted broadcast, the fields being afterwards divided into beds ten feet wide, and when the crop is approaching the stage of ripeness such a

plantation presents a beautiful appearance, the ground being covered with the flowers, which are not red in color, the poppies being of a pale blue or white. The plant, collected on leaves in small quantities, is partly separated, and being then of the consistency of soft mud, is worked into balls about six inches in diameter. These balls, dried in the sun and

thing also for lighting and for the table. The opium belt in India is 600 miles long and 100 miles wide, and the total area planted with poppies is about 375,000 acres. The industry employs no fewer than 1,475,000 people, and an additional 4,000 are engaged in the manufacture of the drug.

The Department of Agriculture is also engaged at the present time in the experiment of producing "hashish," a drug much more dangerous than opium. It is a substance which, when used in small quantities, is perfectly harmless, but is famous chiefly as a narcotic taken for the purpose of producing fantastic visions. The word "hashish" must forever be intimately connected with the most extraordinary association of criminals that ever existed—the so-called Hashishin, who were organized for the purpose of systematic murder. It is from the name of this organization, indeed, that we get our English word "assassin."

Hashish's Hypnotic Influence.

It was in the eleventh century that this murder society flourished, the head of it being known as the Old Man of the Mountain. He was an mythical character, but an actual personage, who, by means of hashish, was able to hypnotize his followers. Larger doses produce frightful results, and the effect of the drug when the

opium is taken in large quantities is to produce a state of unconsciousness, and the user is able to resist any amount of pain.

Finally, the leaves, stalks and exhausted seed pods are ground to powder, which is extensively used for smoking by those who are unable to afford to smoke the opium. The leaves, however, as they fall from the seed pods are carefully collected and made into cakes, which are then pressed into cakes in shape and size, the process of manufacture consisting in having them on iron plates and allowing them to cool. Thus they are

wrapped in poppy leaves, are the opium of commerce.

SUMMER DRESS FOR CHILDREN BY MRS. OSBORN CREATOR OF FASHIONS FOR THE FASHIONABLE WOMEN OF AMERICA

the only variation from this rule is an occasional dress of blue or tan lines a dress of pique and a little riding habit of khaki cloth.

All manner of loose laces, heavier laces and the cotton fabrics are used for making dresses for children, and they are cut according to the weight of the material and the softness or stiffness of weave.

Necks for children's gowns are invariably cut round or square, with more of a preference for round necks, and their sleeves are built much on the order of those made for grown-up people, with puffs to the elbow and more or less elaboration. The trimmings do not appear showy; if they exist, however, it is lighter in character and they have there isn't nearly as much of it as there is upon the sleeves of a woman's gown.

For simple frocks I would suggest an equally simple puff, ending midway on the arm, instead of at the elbow, and with the termination of the puff. Little ones who are also worn, but there is not as smart as the puff.

Lavishly children wear gimpes in their dresses. Frocks not low and round in the neck and with short sleeves are by no means worn. While children will wear their hair loosely, however, to one side and combed down, the hair is tied away from the eyes.

A charming example of an elaborate frock is shown in figure A. It is of fine lawn, with wide lace, and has its full skirt gathered twice below the belt. There are above and below it, and it is then edged with a deep border of Irish lace and a band of lace.

A round collar of alternate stripes of lawn and embroidery is set upon a round neck and this is finished with a deep border of the collar, too, is very original and attractive.

Little sleeves of embroidery are edged with wide lace, and the top of the bodice is elaborated with large unbordered appliques. A deep point of lace is laid in the front of the bodice and the back is finished with lace.

The Embroidered Frock.

The little gimpes worn with this dress has a ruffle of soft lace, with ruffs of the same at the end of long sleeves.

Another pretty frock is shown in figure B. This is a full skirt of lawn gathered at the top with a very attractive heading to the hem, made by scalloped edges with lace insertings. Pieces of the material, edged in the same fashion, are set in the dress above the hem over the bottom of each alternate piece.

The skirt is finished by a lace belt, and bands of the same lace outline a panel down the front. This is made of the material, with dices inserted down the centre, edged with lace. The material, edged in the same fashion, are set in the dress above the hem over the bottom of each alternate piece.

The collar has scalloped lace lawn applied panels. The skirt is gathered to the ankle and has three rows of narrow trimmings around the bottom. This may be lace, embroidery, folds or ribbons, according to the material on which the trimming is placed.

The sleeve is gathered to the armhole and set in a pleated and tatted band above the elbow. Here an embroidered band is followed by another of tatted and lace.

for a child of from six to twelve years is shown in figure A. It is of fine lawn, with wide lace, and has its full skirt gathered twice below the belt. There are above and below it, and it is then edged with a deep border of Irish lace and a band of lace.

The sleeve is gathered to the armhole and set in a pleated and tatted band above the elbow. Here an embroidered band is followed by another of tatted and lace.

The puffed sleeve has a scallop all across and is the shape of a crescent, with wide unbordered edges. Dices are applied on the sleeve and below it, and it is then edged with a deep border of Irish lace and a band of lace.

The application of these dices and half-dices is wonderfully effective, yet simple, and is able to fasten with a fine, narrow lace, making a child's dress, and it will be seen that there is no elaborate in having such an elaborate dress.

In figure B is shown another attractive model for a child's frock. It is suitable for children between the ages of four and ten years—valuing the older child is larger for her age, who wears suitable for an older child than for a younger.

The dress has a square yoke of lace with little ruffs of lace around the neck and between the insertings. A lace ruff edges the yoke. The full bodice is elaborated with lace insertings, but in no stripes, and a full skirt hangs to the knees. This is trimmed with lace, and a square of lace is laid in the front of the bodice and the back is finished with lace.

A square ruff is gathered to a round lace neckband, and insertings is put in square upon the shoulder above a full deep edge of lace. The material may be either gathered or tucked between rows of insertings.

The little bodice is not very full, and is finished with a wide, loose belt of tulle and insertings. A full bow, with long ends, is placed at the bottom, in the side of the bodice.

The short skirt is very full, and is trimmed with two rows of lace insertings around the lower portion, with a cluster of tulle between. A full border of lace runs

around the lower portion, with a cluster of tulle between. A full border of lace runs

Costly Simplicity a Feature of Clothing for Children.

The little girl has as elaborate needlework upon her dresses as her mother wears.

linen, mulle and lawns for little girls.

pleases the admiration of the skirt. The sleeve is a full puff, terminating in two rows of stitching and followed by a second puff, gathered into an embroidered cuff at the wrist.

Puffed sleeves are as popular among children that they appear in nearly every form, from the simple puff on the upper arm to rows of small puffs down the whole length of the sleeve.

COAXING RAIN AND PURE WATER FROM THE SKY.

Prof. Hatfield Won \$1,000 from the Astonished Merchants of Los Angeles for Producing Rain, Until They Asked Him to Stop

How the Australian Government Is Running Pipes Up Into the Clouds to Draw Pure Air for City Homes and Invalids in the Hospitals

PROFESSOR CHARLES M. HATFIELD is making plans to demonstrate his rain-making discovery on a larger scale next season. The merchants of Los Angeles, who on the 15th and 16th of 1919, paid him \$1,000 for his rain-making, have now asked him to stop.

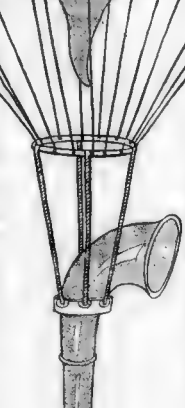

Experimenters show that the air of all countries in the vicinity of cities is full of dust, germs and fumes. We may eat perfectly pure food and drink perfectly sterile water, but we are taking in a thousand times as much of the air as we breathe. The air is the chief reason, doctors think, why lung troubles are the most common and fatal of human ailments.

Experiments show that the air of all countries in the vicinity of cities is full of dust, germs and fumes. We may eat perfectly pure food and drink perfectly sterile water, but we are taking in a thousand times as much of the air as we breathe. The air is the chief reason, doctors think, why lung troubles are the most common and fatal of human ailments.

The inventor of the scheme thinks every city should have its fresh air supply. The drawing power by advertising that they supplied only 1,000 feet of air to their journey. Every hospital should be supplied exclusively with this air, which could be warmed in winter and would be good in summer, and there should be public places where one could drop in and take a breath of pure air.

The inventor has submitted his plans to local doctors and engineers. The doctors agree as to the great hygienic value of air obtained in the way suggested, but don't think the feasibility of the scheme. The engineers, however, do not seem to think it impracticable.

The Australian Government has now become interested in the idea and is

taking the experiment out of the laboratory and putting it into practical use. The Australian Government has now become interested in the idea and is taking the experiment out of the laboratory and putting it into practical use. A New Style French
Fancy Waist, to be
Easily Made at
Home

Visit this office in
blank and ten cents in
money or stamps to "French Waist
Patterns," P. O. Box 260, New York City.

Sunday American-Journal-Examiner Patterns.

No. 170-2893

..... inches bust.

Name

Street and Number

City

State

EVERY young woman who adores a pretty
waist will be interested in the new French
fancy blouse illustrated on this page. The
design was made especially for the Sunday
American-Journal-Examiner series of patterns,
and combines style and attractiveness with
such simplicity that any woman can very
easily make one of these waists at home her-
self, no matter whether she is an experienced

dressmaker or not.

The pattern for this waist, No. 170-2893,
is offered today to Sunday American-Journal-
Examiner readers for ten cents. Accompanying
the pattern are complete directions showing just
how to make the waist.

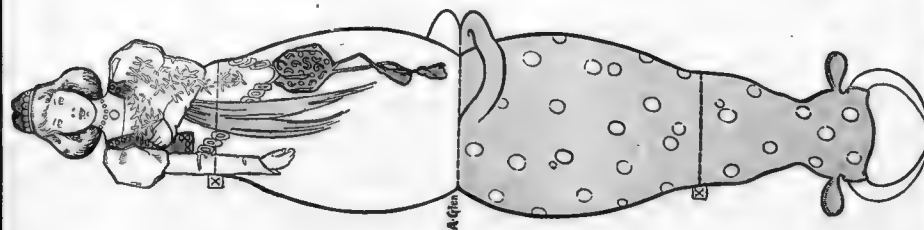

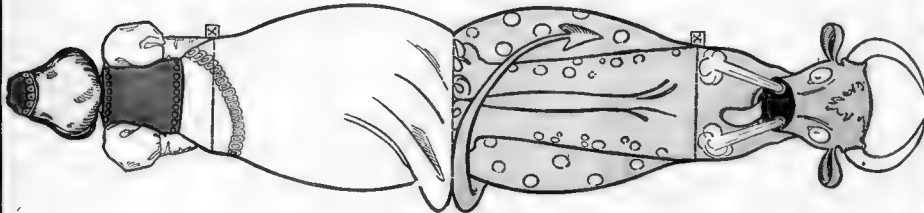

To obtain the pattern and directions fill in
the accompanying blank, giving name, address
and size of pattern desired, and mail with ten
cents in money or stamps to "French Waist

Patterns," P. O. Box 260, New York City.
Please note before ordering that the pattern
has been cut in the following six sizes only—
32, 34, 36, 38, 40 and 42 inches bust measure.
Orders for this pattern in any other size cannot
be filled.
In the original of this design every hole in
an old rose shawl served as a foundation, while

yoke and cuffs were of Valenciennes insertion
held together with fine lace stitches. If an
evening bolero is desired, the cuffs and yoke
may both be omitted and a frill of lace finish
the sleeve. The material required for the me-
dium size is 4 1/2 yards 36 inches wide.

NURSERY RHYME TURNOVERS

"BEAUTY AND THE BEAST."

Copyright, 1905, by the American-Journal-Examiner.

DIRECTIONS

Cut out the two double figures, carefully following the outside line. Fold upward both views of the Beast's head and the upper half of Beauty on the lines X. Fold on the lines at the feet and paste Beauty (front view) to the back view of the Beast, and the other front and back views together in the same way as far up as the lines X. Paste the two halves of the Beast's head together and paste the two halves of Beauty together from head to waist. Then let the turnover dry thoroughly. Hold Beauty by the front of her gown. Make her bow her head. Beauty will instantly vanish and the Beast will appear instead. Tap the Beast on the nose and Beauty will reappear.

Wholesale Poisoning a Great American Industry

Oppen's cartoon shows what he thinks should happen to the food adulterator, AFTER DEATH. But something OUGHT to happen to him now, without waiting for death. How long will "enterprising business men" be allowed

Each of us eats or drinks a certain amount of poisonous trash annually—IN ORDER THAT BUSINESS MEN MAY MAKE MONEY.

The adulteration of food and drink is, with us, a regularly organized business. It is so well organized that the business man who refuses to engage in it can scarcely survive his honesty. He must manage in some sensational way to make people KNOW that he is honest—in order to draw special patronage and be allowed to charge reasonable prices. Otherwise he goes to the wall, and the public poisoners, with a grin, hear of his failure.

Adulteration has gone so far that the PURE article is the exception.

Everything that is eaten or drunk is adulterated, if it can be adulterated. In many lines the adulterated food and drink consumed FAR EXCEEDS IN QUANTITY THAT WHICH IS PURE.

The poor children drink impure milk—poisoned with formaldehyde or other drugs—nine times out of ten, in all the big cities.

Poor men drink poisonous, adulterated beer and whiskey that, in many cases, actually causes death within a short time. Arsenic in beer causes more deaths than any big war; and as for poisonous whiskey, it is the grave-digger of every potter's field in the United States.

And the rich do not escape. Their wines are adulterated with poisons which alone give the required imitation. Their cigars, and especially their cigarettes, are doctored with drugs of various poisonous kinds. Tea and coffee adulteration is so extensive that it constitutes an excellent paying industry by itself.

All spices are adulterated—usually with matter absolutely indigestible, that clogs up the system and runs the stomach. The United States Government has published a list of some scores of substances, all harmful, that are used in adulterating spices only.

Bread is made poisonous with wretched baking powder full of alum, and with flour adulterated in various ways. The bran fed to horses and cows is mixed with sawdust, which destroys the digestion of the unfortunate animals.

Powdered sugar is adulterated so much that the wise man never thinks of using it. Sausages, sold in great quantities, are made of such stuffs as could not be properly enumerated in detail. Pickles are prepared with biting chemicals to take the place of vinegar, and these chemicals quickly destroy the lining of any stomach.

Every cheap soda water and lemonade stand is a poison dispensary. Children are made to drink a dilution of marble dust, called soda water, flavored with citric acid.

A child on the street holds out a penny for one of the big chocolate candies ranged in dusty rows. He gets for his penny germs from the street dirt—but he gets NOTHING LATE. The stuff given him to eat is made of sugar not flavored with chocolate—a MINERAL SUBSTANCE consisting of clay, etc., absolutely indigestible.

The hungry child, craving the carbon of pure hands his penny to the peddler representing "business honor," and he gets for his stomach a lump of clay flavored with some artificial chocolate flavor.

Do you wonder that the street children of London have white faces?

Their milk is poisoned. They buy a sandwich made of poisonous sausage, smeared over with horribly adulterated mustard—no real mustard in it. For dessert they get a lump of clay called chocolate. Then they play on filthy streets, sleep in close rooms, breathing foul air.

Many die—which is no wonder. The wonder is that they do not ALL die. No animal save man could stand the treatment to which modern business methods subject modern human beings.

It is a perfect system of swindling, adulterating and poisoning that our splendid American "competitive system" has built up. It is a competition as to which shall most thoroughly swindle, cheat and poison the public under cover of "business methods."

The human being in his babyhood is regaled with poisonous milk.

And when the time comes for him to die he is doctored WITH ADULTERATED MEDICINES, many of them poisonous also.

Do you happen to know the results of a test among the drug stores of New York State—fairly typical of drug stores in general?

An official report to the State Board of Pharmacy showed that in the drug business swindling and adulteration are counted among the fine arts. There were honest druggists to be found, but they were interesting curiosities.

The inspector purchased ninety-eight samples of drugs in the "middle district" of the State—including Albany, Syracuse and Rochester. Of these ninety-eight samples EIGHTY-EIGHT WERE BAD.

All but TEN of the ninety-eight specimens of business honor were adulterated—many actually poisonous. In the city of Buffalo seven druggists were visited, seven samples of drugs were tested—AND THEY WERE ALL BAD.

In New York City druggists, after one series of unpaid \$25,000 in fines—without resting payment in court. They were simply notified that their fine was so much—and the paid without a murmur. Even with spasmodic fines in honest PAY'S better than honesty. And our magnificent competitive business system asks just of all "WITING PAYERS." Poisoned in the cradle and poisoned on the sick bed, poisons for the baby, for the growing child for the grown man, for the dying man taking his medicine— isn't that perfect?

This is AN AGE OF SYSTEMS. We have the FINANCIAL system, which robs the people of their savings through stock bubbles, insurance fraud, etc.

We have the TRUST system, which robs the people through high prices, and robs them of the control of their government at the same time.

We have the system of FOOD ADULTERATION, which robs the people of their health.

We have the POLITICAL system, which robs the people of their remedy, which would be DRASTIC and EFFECTIVE LEGISLATION, followed by faithful official action. What is to be done?

Various things. First, THE STUPID, SLEEPY PEOPLE MUST WAKE UP AND GET INTERESTED.

When you see a man beating a horse ten times as weight you know what the trouble is—the horse doesn't know enough to knock the man under his feet and bite him at the first opportunity.

The people don't know enough to knock the system under their feet and bite holes in it at the first opportunity.

An opportunity occurs at every election. But then our political system comes in. The candidates are chosen by the very men that rob and poison the people between elections.

The people have got to take more interest in their own elections.

They have got to know what they are voting for and WHOM they are voting for.

They have got to take national monopolies out of private hands and keep them in their own hands—the Government's hands.

They have got to GET A FINANCIAL INTEREST

IN THE GOVERNMENT, THROUGH PUBLIC OWNERSHIP, since only a FINANCIAL interest seems capable of arousing our people.

As for the food poisoners, with whom we deal especially so far, they could be dealt with very easily—if we elected officials to serve us, instead of electing men ready to sell out to the highest bidder.

Do you know, for instance, that the United States Senate, the highest power in this country—actually is owned by the food adulterator?

A pure food bill has been beaten in the Senate, and will CONTINUE to be beaten in the Senate. In that body sits a disreputable gang of public thieves, betrayers of the people and all around national crooks as the world has ever seen. They will not pass a bill to protect the people's food—because THEY are in the swindling business THEMSELVES, and they care more for one big criminal of the business world than for all the voters of the country.

Yet voters send small criminals to the Legislature, that they may take bribes and send big criminals to the United States Senate.

Don't you think the people should take the trouble to elect honest men to the Legislature, AND TO ELECT THE SENATORS BY DIRECT VOTE THEMSELVES?

A man looked upon as most powerful in the Senate is such a common scoundrel that his fellow-members will not play poker with him, although they are largely natural scoundrels.

What chance do you think a pure-food bill has got among a cartoon of that sort? If you have such wretched dogs at the top of your political machine, what do you expect at the bottom?

Let us now turn, I might to wake up and protect ourselves against the poison of "leaders," the hanging criminal blood-suckers who eat a their pay from trusts, adulterators of food, all national swindlers—and in return nominate their agents to public office.

For to elect men in office—honest men DO exist.

Establish national and municipal laboratories to test—FREE OF CHARGE—all food and drink bought by a citizen in the original packages.

Destroy all the businesses of any man caught swindling through adulteration. Close his store, saloon, tobacco store, or any other store.

Make of him a convict, forever debarred from voting and from future opportunities of swindling the public. Treat the man who steals millions through poisoned food as you now treat the man that steals ten dollars.

You American people NEED not be poisoned, swindled, "swindled" out of your money forever.

Just WAKE UP. Stop acting like the poor-spirited cart-horse that takes his beating so pathetically.

BOSTON'S RICHEST MAN.

How Gas and Brains Have Put A.C.Burrage at Head of List of Massachusetts Millionaires

BURREGE HOSPITAL

NO. NINKIN ISLAND

HOME OF MR. A. C. BURRAGE ON COMMONWEALTH AVE.

A. C. BURRAGE.
BOSTON'S "COPPER KING."

[illegible]

Who is the richest man in Boston? State Street financiers and men thoroughly conversant with the world's holdings of Boston's long list of wealthy men are practically agreed that this proud distinction now belongs to Albert Cameron Burrage, lawyer, financier and first lieutenant of Standard Oil and "The System" in New England.

tion and brains made Mr. Burrage the richest man in Boston. The story of his rise in the world of *Savage* reads like a romance. Twelve years ago he was a young and struggling lawyer. He soon found he was in financial straits. The rewards of the Poor

To-day a conservative estimate of his wealth is between \$20,000,000 and \$30,000,000.

Whence came this golden flood?
Who made it possible for Albert C. Burrage in a little over a decade to
make millions upon millions out of nothing?

Henry H. Rogers, shrewd, able and discriminating judge of men: Henry H. Rogers, brains of "The System" said in *Albert C. Barnes*, the man he was looking for, the man to whom he could entrust some of the secrets and some of the inner workings of Standard Oil.

Almost in an instant he was lifted out of the position of the struggling lawyer and placed in the seat of the rich and mighty. He soon counted his wealth by the hundreds of thousands; a few years more and he counted it by millions.

the period of another twelve years?
Opportunity came whizzing by young Mr. Burrage.
He seized it and hung on with all his might.
In his case "light led to lucre."
Here is the story of Albert C. Burrage's meteoric rise in the world of

AMAZING STORY OF YOUNG MAN
MADE RICH BY STANDARD OIL

BUTLINE says ago Albert C. Burrage was a poor and struggling lawyer. Men who know him well and envy his success delight in telling of the straits he was in. They say that he found it hard to pay his office rent and that a collar seemed as large on his horizon as a harvest moon.

Now his wealth is surmised to be anywhere between \$250,000 and \$500,000, and plausibility of the ordinary promoter who has been successful in his career and any all things in a simple way. He might be said to have been a little too young that he had in his life found a way to get rich. He is now a man who would make the Standard Oil, him to push A. B. C. and what can be said in Boston. It did not take Mr. Rogers long to learn that Mr. Burrage had the goods.

between \$20,000 and \$30,000.

His accumulation since his fortune was at the lowest level would be at the rate of \$200,000 or \$250,000 a year. It was this opportunity came when J. Edward Adkins, the original Gen Trust promoter in Newton, and Henry H. Rogers, the Texas Rupter of the Standard Oil army, locked horns in a desperate attempt to butt each other off the local

Caught Rogers's Eye

How this same opportunity was in the value of dog, and up to a very high value. Adkins had a number of very high priced lawyers on his staff, but none of them discovered that the old charter of the Brooklyn Gas Company gave it the right to parallel the gas company's pipes and mains in Boston streets.

That fact was learned by Mr. Burroughs when he was too slowly as a lawyer to

[illegible]

men in America—notably John D. Rockefeller—make no noise.

If Mr. Burrage, when he first submitted himself to the scrutiny of Henry H. Rogers's X-ray eye, had gone into the strenuous presidency with the assurance

Dignity and Reverence

A. C. Burrage, the Man; His Characteristics, Likes, Dislikes

Below medium height, square shouldered and of compact figure.

Well shaped head, with eyes set well apart,
Most, unobtrusive and not fond of the glare of the
midnight.

Not socially ambitious. Lives in lavish style.
Devoted to his family. A deep student of men.
Fond of good horses.

This is a pen picture of the man whom the magic touch of Standard Oil has made a multi-millionaire in the space of a few short years.

Mr. Burrage was born on \$2,500,000 to the Standard Oil Co. He is the only son of the late Mr. Burrage, who died in 1928. He is the only son of the late Mr. Burrage, who died in 1928. He is the only son of the late Mr. Burrage, who died in 1928.

and How to Obtain Them

The couple is now said to be at the home of Mr. Bourne's grandparents, Manchester, N. H.

TWO BATTLESHIPS, IN HANDS OF MUTINEERS, MENACE ODESSA

GUNS OF KNIAZ POTEMKIN READY.

Report of Surrender Was Unfounded, and Russian Diplomacy Deceived the World but Temporarily.

Three hundred fifty mutineers, who, according to official reports, were disarmed, took refuge in the fortress of Potemkin, and the Russian government, which had been deceived by the report of the surrender, is now in a position to blow up the building when the Russian and the world are deceived.

RUSSIA SWEEP BY A WAVE OF FIERCE REVOLT

London, July 1.—Panic for forty-eight hours by continued reports of the capture of the Russian battleships at Odessa and in the Black Sea, diplomats here today grasped at a dispatch stating that the Russian government had demanded the surrender of the Russian fleet within forty hours, under the threat of bombardment, as according to the report.

They are believed to believe this as correct, and believing that they think that Russian diplomacy previously obtained the situation there, by interpretations.

It was a desperate attempt to halt the wave of anarchy and blood which was sweeping over all Russia, and tried to stop the tide of the rebel army of the Russian fleet.

It was a desperate attempt to halt the wave of anarchy and blood which was sweeping over all Russia, and tried to stop the tide of the rebel army of the Russian fleet.

HAY'S DEATH A PERSONAL LOSS, SAYS KING EDWARD

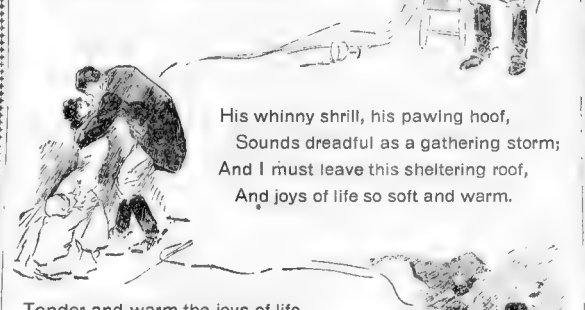

JOHN HAY AT SIX PERIODS OF HIS CAREER

THE STIRRUP CUP.

By John Hay.

In which almost with prophetic vision he foretold his death.

My short and happy day is done,
The long and dreary night comes on;
And at my door the Pale Horse stands,
To carry me to unknown lands.

Tender and warm the joys of life,
Good friends, the faithful and the true;
My rosy children and my wife,
So sweet to kiss, so fair to view.

Europe Joins America in Tributes, Messages of Condolence From Every Corner of the World.

[illegible][illegible]

Secretary Hay was the greatest diplomat and statesman I have ever met. He had a singular and remarkable talent in making negotiations with foreign governments at just the right time. His chief qualifications made him probably the greatest Secretary of State the country has ever known.—*W'ed am H. Taft*

SUDDEN DEATH ENDS GREAT LIFE

[illegible]

I can add nothing to the words I uttered when he was given his degree of LL.D. in 1883: "John Hay, by force of just and liberal thinking, the most successful diplomat now living."
(Charles W. Eliot.

[illegible][illegible]

...I was very much more friendly
...and their wives too.
...and the
...end of the war gave him many dollars of
...for my car and for my house.
...to him. He had many things to
...of it. He was very

PRESIDENT ROOSEVELT TO ATTEND THE HAY FUNERAL

BRETTES IN CLEVELAND WEDNESDAY.

Honors to Great State Secretary to Be Paid in City That Was His Former Home, Where He Met Wife

Continued from Page 34.

other living men did, and there was no which he talked over so much with his friends as Lincoln's acts and character, his difficulties and triumphs.

His death was especially shocking to a President because it was our own. It was the loss of the man who had been the greatest of the age, the man who had been the greatest of the age, the man who had been the greatest of the age.

My sense of deep personal loss, great though it is, is lost in my sense of the bereavement to the whole country in Mr. Hay's death. The American people have never had a greater Secretary of State than John Hay, and his loss is a national calamity.

HIGH TRIBUTES OF CABINET MEMBERS

Washington, July 1.—John Hay's colleagues in the President's cabinet are paying the following tributes of admiration to the man who has been the greatest of the age, the man who has been the greatest of the age, the man who has been the greatest of the age.

Secretary Hay was a thoroughly trained and well-balanced man. He made a country a power for the first time in its history. He was a man of great ability and great character. He was a man of great ability and great character. He was a man of great ability and great character.

Secretary of the Treasury, Charles D. Smith: In the death of John Hay the nation has lost one of its greatest citizens and its greatest public servants. His name will live forever in the annals of our country.

Secretary of the Navy, Charles F. Smith: It was truly a sad day when the announcement of Mr. Hay's sudden death was made. He was a man of great ability and great character. He was a man of great ability and great character. He was a man of great ability and great character.

John Hay has exalted the ideal of the public servant. He has exalted the standard of this country in its relation with the world at large. He has given tone to its diplomacy that will last. He has done great work, which will not die with him.

—John D. Long

CHIEF DEEDS OF SECRETARY HAY

Washington, July 1.—The achievement of John Hay, whose sudden death early this morning put an end to the career of a brilliant Secretary of State, made him a national figure and a new star in the annals of the world.

These are John Hay's principal diplomatic achievements: The Panama Canal, the "open door" in China, the restoration of the Eastern policy that was one of the first to be constituted a new policy of the world with Spain, the treaty of the Alaska boundary treaty with Great Britain, the restoration of the alliance between Great Britain, Germany and Italy against Russia, the restoration of the alliance between Great Britain, Germany and Italy against Russia, the restoration of the alliance between Great Britain, Germany and Italy against Russia.

When he was appointed to President McKinley's cabinet, Mr. Hay was a man of great ability and great character. He was a man of great ability and great character. He was a man of great ability and great character. He was a man of great ability and great character.

John Hay, Secretary of State.

He received the official news of Mr. Hay's death at the following message: The President, July 1, 1906. Mr. Hay died of sudden death at 12:12 P. M. His death was a great loss to the country. His death was a great loss to the country. His death was a great loss to the country.

—MRS. HAY

Taft Likely to Succeed.

It is the general impression that there is a possibility that Mr. Taft will be the new Secretary of State. It is the general impression that there is a possibility that Mr. Taft will be the new Secretary of State. It is the general impression that there is a possibility that Mr. Taft will be the new Secretary of State.

'I'M AFRAID,' SAYS LAWSON. OF WHAT? WALL STREET? NO! KANSAS!

This is the Most Vivid and Interesting Interview With the Author of "Frenzied Finance" That Has Ever Been Published.

FREE FROM POLITICAL AMBITION

Idea of Being Governor Has
Never Entered His Mind,
and He Would Rather Be
in Jail Than in Politics

"ABSURD," HE SAYS
TO ELEANOR AMES

His Fight Against "System"
and His Roses and Horses
at Beautiful Dreamworld
Now Take Up His Time

By Eleanor Ames.

Let it be said for all time, Thomas W. Lawson has no political ambition.

He has no intention of developing any. He declares his work leads him in another direction.

He doubted my seriousness when I asked him if he would like to be the Governor of the Commonwealth of Massachusetts, and told me tersely, emphatically, vigorously, in his own original way, that he has never thought of attaining political greatness, nor had he any idea that such greatness was in danger of being thrust upon him; and, furthermore, if it were, he would not know what to do with it.

"You like to be Governor?" I asked. "I don't like to be Governor," he replied. "I don't like to be Governor," he replied. "I don't like to be Governor," he replied.

"Are you joking?" he said. "No, very serious. My editor wants to know."

"I never thought about it for a moment," he replied finally, "absolutely never thought about it. However, this idea led me thinking."

"Why, I can't imagine anyone giving me a chance to be Governor. My work is so exactly opposite any such course," he laughed again.

"But it's not a parallel case," I replied. "I don't know, but you might be Governor. What would you do if the Governorship should be offered you?"

"Lying," Mr. Lawson seemed to see the humor of a situation I thought was quite absurd.

"If it was," he mused. "Well, I'm trying to think how I'd feel if I were given a lot of wings with which to fly. I should have them clipped off, for I'm fond of being on the ground."

"But if you are really serious, though it seems absurd to discuss such a possibility, I should say it would be impossible for me to take it. Why, I would as soon be sent to jail for life, for then there might be some hope of my being pardoned. If I mixed up in the political game, even that hope would be taken from me."

Has Absolutely No
Political Ambition

"Does he have an ambition for his country, his race or greater than for himself?"

"He looked annoyed."

"I have absolutely no political ambition," he said at last.

"My political views? Oh, I've been a free trader since I was a child. I've been a free trader since I was a child. I've been a free trader since I was a child."

"I've been a free trader since I was a child. I've been a free trader since I was a child. I've been a free trader since I was a child."

"I've been a free trader since I was a child. I've been a free trader since I was a child. I've been a free trader since I was a child."

"I've been a free trader since I was a child. I've been a free trader since I was a child. I've been a free trader since I was a child."

Lawson as a Woman Sees Him

Here is "Tom" Lawson as he looks to a woman—Thomas W. Lawson, the millionaire, the debonnaire, the fighter, the lover of horses, statuary and flowers. Read this, and you will get a new view of "Tom" Lawson, a view which, it is needless to remark, is quite the contrary of that held by certain gentlemen in Wall Street.

So, the third one—see the twinkle in his eyes? He's a shy young chap, up to all sorts of pranks. Still, he's watching them look at this drive over on the book case. That big chap at the end is the boss of the game, and the others are working for him. That's a most interesting group, because it's always changing. Every time a new man is added, the elephants get moved about, and the change in position of even one makes a change in the effect of the whole group. I stared in amazement. Not at the elephants, but at Mr. Lawson himself.

I don't believe anybody knows what "Tom" Lawson, except for a few days of his "Frenzied Finance" when he is grinded out 25,000 words each month. That is nearly a thousand words a day of carefully written work.

I have to write it rapidly, he says, "for thousands of people are waiting to have me make a point. The more I write for a contribution, the more I like to say. Look here, Lawson, on such a drive you said so and so, now you say this. How about it?"

Up in the present time Mr. Lawson

Many-Sided Man and
Full of Surprises

Where in one individual was there ever such a mixture? So unreserved, so unreserved, so full of surprises?

The old sage says that in order to know a person you must "Summer and Winter" with him.

Summer and Winter, if you please, year after year, with "Tom" Lawson, and I verily believe, unless you possess supernatural powers of insight, you would need an introduction to him, at the end of that time.

There he sits, day after day, working incessantly, with his finger never leaving the pulse of the world, controlling millions by the sound of his voice, revolutionizing the great world of finance with a few strokes of his pen as he reveals facts, whose influence upon the financial and business future, no one has so far had the nerve to predict, and at the

same time nothing when one of a hundred or more top elephants is moved an inch from its accustomed place.

It is a characteristic of nature, this flexibility of thought, the ability to change with a lightning rapidity from business to recreation and back again, that makes Tom Lawson able to work as he does and still retain his health.

Apparently "Frenzied Finance" has not worn upon him in the slightest. His color is good, his eyes bright, his bearing alert and full of energy.

To be sure, he always reminds one of a steam engine, whose is throttled against its will, for he invariably gives out the impression of having so much in reserve.

It is as if all he has done and is doing had only used up the steam which needed vent, and that beyond was an endless, inexhaustible force.

Has written approximately 200,000 words of "Frenzied Finance."

In the month it has been a heart to heart with "Tom" Lawson.

The end is not in sight, so he tells me.

Has Not Met Rogers Since "Finance" Began

Yet Mr. Lawson is far from staid. As he says "I'm coming with enthusiasm. My heart is in the work."

His 200,000 words have not begun to exhaust his vocabulary.

He has more good and clever and apt similes in his mind than have ever dropped off his pen point.

Since beginning this world-famous story Mr. Lawson and Mr. Rogers have never met, nor have they exchanged any letters.

Shocking letters, have you any idea arrived daily

"TOM" LAWSON, ENEMY OF "THE SYSTEM," CAUGHT IN CHARACTERISTIC ATTITUDE. Sketched by Artist Carril, of the Boston Sunday American staff, as the broker and financier, in his office, explained his views of "Finance" and "The System." His fondness for statues of elephants is shown. Referring to this Mr. Lawson says: "Elephants are a lot better than the system I have been collecting them. To me they are the wisest of animals."

Some Lawsonisms.

"Politics? Not for me. I prefer jail."

"People laugh when I say the mob scenes of Paris will be repeated in America."

"And if all that could happen in the most prosperous time this country has ever known, what's going to happen when bad times come and people are wrestling for bread?"

Not all of those 200,000 letters are also involved, included in the "Frenzied Finance" type.

Many are threatening, several hundred in a day at times.

The writers tell Mr. Lawson that they are waiting for him to make a point.

Mr. Lawson says that he is waiting for them to make a point.

Mr. Lawson says that he is waiting for them to make a point.

Mr. Lawson says that he is waiting for them to make a point.

Says, "But I'm Going to
Give It to 'Em Strong"

AVOIDS DELAY BY
CANADIAN ROUTE

Financier Will Talk to the
Westerners on Finance and
the "System," His Idea
Being to Educate Them

ITINERARY OF TRIP OF LAWSON TO WEST

Itinerary of Thomas W. Lawson's western trip:

July 5—Leaves Boston 11:30 a. m. for Montreal.

July 6—Leaves Montreal 10:30 p. m.; arrives Chicago 9:10 p. m., July 6.

July 7—Speaks before Knickerbocker Club, Kansas City, evening.

July 8—Leaves Kansas City 8:50 a. m., arrives Ottawa, Kan., 11 a. m., speaks in afternoon.

July 10—Leaves Kansas City 8:20 p. m., arrives Fairbury, Neb., 3:45 a. m., July 11.

July 11—Leaves Fairbury, arriving Omaha 3:30 a. m., July 12.

July 12—Leaves Omaha 5:45 a. m., arriving Muscatine, Iowa, July 12, morning.

July 12—Leaves Muscatine Valley in evening, arriving at St. Paul, 2:10 a. m., July 13.

July 14—Leaves St. Paul for Albert Lea, a two-hour trip; speaks at Albert Lea.

July 15—Leaves Albert Lea at night for Chicago, arriving 10:55 a. m.

July 15—Leaves Chicago 8:00 p. m. for Boston, arriving 8:10 a. m., July 17.

To buy a home and fit up the place generally and told in five long pages how the money should be used and what the result would be.

What interest Mr. Lawson at the time of moment more than anything else in the world is his forthcoming western tour.

Already obstacles have been placed in the way of that trip. Instead of going through New York State, the route will have to be through Canada.

In New York certain legal matters might be served which would delay his journey.

"Going to Give It to 'Em Good and Strong"

"I don't care about the matter itself," Mr. Lawson, "but I have not an hour to spare."

He took up some pencil-covered copy.

"That's the beginning of my speech," he said. "I'm going to give it to 'em good and strong, but I don't want an arm to get out of going. The truth is I'm afraid. Yes, sir, I'm afraid. You see, it's my maiden speech, and I'm scared to death of scaring all those strange people."

Fellow "Tom" Lawson being afraid of scaring all those strange people.

The trip is going to be a strenuous one. It will consist of a tour through the western states, visiting various cities and speaking at public meetings.

Mr. Lawson's first speech will be at Ottawa, Kan., on the 11th of July. He will be accompanied by his wife and two children.

NEAR DEATH BY FALL OVER STEEP CLIFF

A black and white photograph of the National Congress building in Washington, D.C. The image shows the large, ornate dome of the U.S. Capitol building, with its classical architectural details like columns and pediments. The building is reflected in the water in the foreground, which appears to be the Tidal Basin. The photograph is framed by a decorative border consisting of a repeating diamond or star pattern.

The train was brought to a halt. The engineer climbed down from his cab and one of the fellow who was wanted for a chew of tobacco, still the same.

The train went on to Rome, where the incident was reported. Officers went to the scene of the hold-up on a shifting engine and arrested the individual, who was found impersonating a switch tender for a chew of tobacco. He gave the name of

**SNORED IN CHURCH;
PAID FINE OF \$10**

On one occasion, she says, her husband sent her to her father's home on some pretext, and when she returned she found he had disposed of all their household furnishings.

**BABY ALL SMILES
AFTER LONG FALL**

Harrison, Ohio, July 1.—A large charge of dynamite exploded in a bank here today. People thought the bank safe had been cracked.

The Big Four passes over the culvert but the residents of the neighborhood claim it is not large enough to permit the water to flow through in the time of heavy rain.

The explosion is supposed to be a movement on the part of somebody to wreck the

1. The first thing I noticed when I stepped out of the plane was the cold, crisp air. It felt like a fresh blanket after a long, hot journey. The ground below was a patchwork of green fields and small villages, each with its own unique charm.

2. As I walked through the town, I noticed how the people here lived. They were simple, hardworking, and friendly. The children ran freely in the streets, their laughter echoing through the air. The old man at the market stall smiled warmly at me, his eyes crinkling with age.

3. The sun was setting, painting the sky in shades of orange and red. The fields were bathed in a golden light, and the distant mountains were silhouetted against the horizon. It was a beautiful sight, one that I would never forget.

4. I found myself drawn to the old stone bridge over the river. It was a masterpiece of craftsmanship, with its arches and carvings telling stories of a bygone era. The water flowed gently beneath it, reflecting the warm colors of the sunset.

5. The night was quiet, with only the soft rustle of leaves and the distant call of a nightingale. The stars were out, twinkling in the dark sky. I felt a sense of peace and tranquility that I had never experienced before.

6. In the morning, I woke up to the sound of birds chirping and the smell of fresh bread. The sun was shining brightly, and the world was full of life. I felt a sense of hope and possibility, knowing that I had found a place where I belonged.

7. The journey had been long and challenging, but it was worth it. I had discovered a new world, one that was full of beauty, mystery, and wonder. I was grateful for the experience and the people I had met along the way.

8. As I looked back on the journey, I realized that it had changed me. I was no longer the same person who had set out on this adventure. I was stronger, wiser, and more confident. I had learned so much about myself and the world around me.

9. The journey was over, but the memories would stay with me forever. I would always remember the cold air of the first day, the warmth of the people, the beauty of the landscape, and the peace of the night. It was a journey that had shaped me and given me a new perspective on life.

10. I was home, but I was also a part of something bigger. I was a part of a story that would be told for generations to come. I was a part of the world, and the world was a beautiful, wonderful place.

mental music published. **Postpaid**

We give you below a few strains of the chorus of the greatest march song written in years, and from present indications will be the rage of the country. It is the work conjointly of Mr. Will D. Cobb and Mr. Kerry Mills. The former is the writer of "Good-bye, Little Girl, Good-bye," Mr. Mills is the composer of the famous "Georgia Camp Meeting," "Rastus on Parade!" and "Whistling Rufus," which is enough to recommend him to all lovers of popular music. He will also be remembered as the composer of the famous "Meet Me In St. Louis, Louis," the writing of which has given him an enviable position in that vast field of song composers.

Words by
WILL D. COBB.

"GOOD-BYE, SWEET MARIE."

Music by
KERRY MILLS

CHORUS: Tempo di Maestri

CHORUS. *Tempo al. moderato.*

The musical notation for the chorus is written on a single staff with a treble clef and a key signature of one sharp (F#). The melody begins with a quarter note G4, followed by a quarter note A4, and then a half note B4. This is followed by a quarter note G4, a quarter note F#4, and a half note E4. The melody continues with a quarter note D4, a quarter note C4, and a half note B3. The final measure of the chorus is a half note G3, followed by a quarter note F#3, and a half note E3. The lyrics "me" are written below the final measure.

Good-bye, sweet Mar-ia, ————— There's life, love, to

Vocal.	Vocal.	Vocal.
When You Care? (Chas. K. Harris, worthy successor to "I'm Wearing My Heart Away")	Mamma's Boy, The Violet, Me Down at Luna Luna	When the Home Acre in the Live My Love I Dare Not Tell. (Song hit from "The Medial and the Music")
Violet. (Great march sung by the composer of "The Man Behind")	Me Down at Luna Luna	Down Where the Swanne River

FOR THE FOURTH IMMORTAL WAITING

The Clock of Monticello.

BY HEZEKIAH BUTTERWORTH.

Written for the Independence Day Number of the Boston Sunday American.

The clock stood in Jefferson's room and the statesman arose
each morning when he could see the time by the clock.

July 4, 1803.

It was summer; cooling breezes all the languid hours fanned,
And the angel of the evening drew her curtain over the land.

Like an old man Monticello through the shades of rippling trees,
Felt the cool breeze of the morning breeze and the silence of the night.

And the clock of Monticello facing through the ancient door,
On her placid bosom mirrored shadowy twilight's silent hour.

Crackled the clock's hand; his shadow; and the stars with falling breath;
The latest day; the morning breeze will send the angel death.

And the clock of Monticello in the silence, in the silence,
Seemed repeating o'er and o'er.

For the fourth immortal waiting, lost in dreams the statesman slept,
Seeing not the still form round him; seeing not the eyes that wept.

Heard not the old clock ticking in life's final silence loud,
Knowing not when night came o'er him like the shadow of a cloud.

In the past his soul is living as in fifty years ago,
Hearts afloat in the old days; hearts afloat in the old days.

Monticello, the clock of Monticello, in the old days,
Hearts afloat in the old days; hearts afloat in the old days.

Who have made themselves immortal—breathe the ancient words again,
Seemed repeating o'er and o'er.

For the fourth immortal waiting, lost in dreams the statesman slept,
Seeing not the still form round him; seeing not the eyes that wept.

Heard not the old clock ticking in life's final silence loud,
Knowing not when night came o'er him like the shadow of a cloud.

In the past his soul is living as in fifty years ago,
Hearts afloat in the old days; hearts afloat in the old days.

Monticello, the clock of Monticello, in the old days,
Hearts afloat in the old days; hearts afloat in the old days.

Who have made themselves immortal—breathe the ancient words again,
Seemed repeating o'er and o'er.

For the fourth immortal waiting, lost in dreams the statesman slept,
Seeing not the still form round him; seeing not the eyes that wept.

Heard not the old clock ticking in life's final silence loud,
Knowing not when night came o'er him like the shadow of a cloud.

In the past his soul is living as in fifty years ago,
Hearts afloat in the old days; hearts afloat in the old days.

Monticello, the clock of Monticello, in the old days,
Hearts afloat in the old days; hearts afloat in the old days.

Who have made themselves immortal—breathe the ancient words again,
Seemed repeating o'er and o'er.

For the fourth immortal waiting, lost in dreams the statesman slept,
Seeing not the still form round him; seeing not the eyes that wept.

Heard not the old clock ticking in life's final silence loud,
Knowing not when night came o'er him like the shadow of a cloud.

Make District Storm Centre

DOUGLAS CLUB AFTER
LINENHANS' SCAL

Alderman Is Not Troubled by
the Opposition, and Says He
Has Beaten McNamara Once
and Can Do It Again Easily

The political storm clouds that have been
hanging over South Boston for some time
have at last been cleared by the re-
sults of the recent election.

When the results of the election were
announced, it was found that the
Douglas Club had won a decisive
victory over the Linenhans.

The Douglas Club, which has been
active in the district for some time,
has now won a decisive victory over
the Linenhans.

Sure, Happy Hooligan Celebrated the Glorious Fourth!

So Did Montmorency and Gloomy Gus

THE LOVE OF LULU AND LEANDER

1. LEANDER: "Mr. Firkin, you, as a leading citizen of this prosperous little village, can fit it for me to have the honor of making the Fourth of July oration. Now, all you will have to do is to have a committee to wait upon me and make the request. Here is a few of the long green. Does it go?"
MR. FIRKIN: "Mr. Leander, it shall be fixed. Many thanks."

2. THE COMMITTEE (reading): "Therefore, be it resolved, that we ask our patriotic citizen, Mr. Leander, to deliver the Fourth of July oration."
LEANDER: "Thank you, gentlemen. I accept the honor with pleasure."
LULU: "Oh, Leander, how proud I am of you."
CHARLEY ONTHESPOT: "It certainly is a great honor for one so young."

3. LEANDER: "And our GLORIOUS COUNTRY!"
THE AUDIENCE: "Hooray! GOOD! That's the ticket! Three cheers! FINE!"
LULU: "Oh, isn't Leander speaking just too grand for anything?"
CHARLEY: "These functions always make me weary."

4. CHARLEY: "Say, Lulu, let's go and shoot off this bunch of firecrackers. It will put a little life into Leander's oration."
LEANDER (as he observes the two): "Why—er—and—er—as I was about to say—"

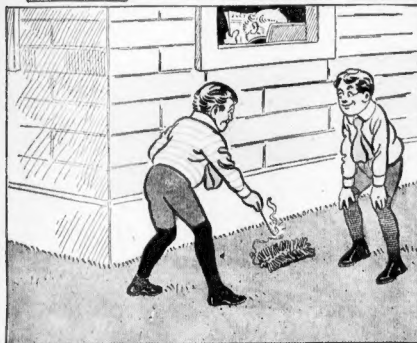

5. LEANDER (forgetful of everything): "Ye gods! Just look at her shooting off those crackers and paying no attention to ME whatever!"
THE AUDIENCE: "Go on! Don't stop! What's the matter with you anyway! Don't mind them! Hoot! He's gone dippy! Why don't you make your speech?"

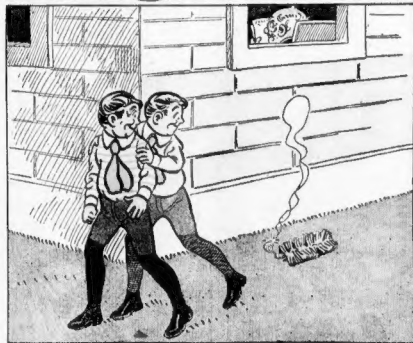

6. LULU: "I never was so mortified in all my life. The way they hooted and howled at you was fearfully humiliating. Why did you ever try to make a speech? You know you can't. I am downright ashamed of you, Leander."
CHARLEY: "They think you are a lobster, Leander, but I wouldn't worry."
LEANDER: "I'll a-t-t-e-n-t-i-o-n!"

FOXY GRANDPA

THE BOYS CELEBRATE THE FOURTH OF JULY AND SO DOES FOXY GRANDPA

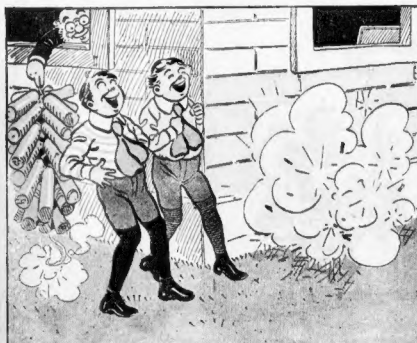

1. BOYS: "Now for a little Fourth of July celebration."

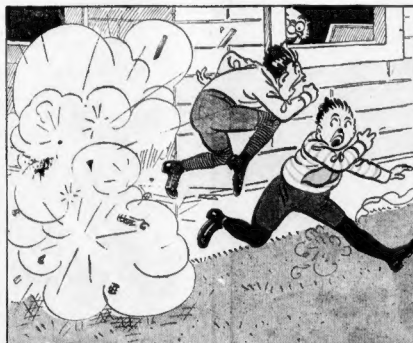

2. BOYS: "That will make Granpa Jump."

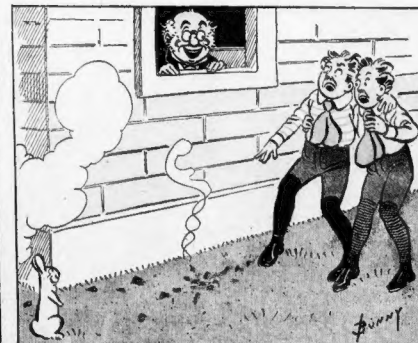

3. BOYS: "Granpa must be too frightened to look out by this time."

4. GRANDPA: "Now I'll show those young mischiefs some real celebrating."

5. GRANDPA: "They seem to be on the move."

6. GRANDPA: "Why hello, boys. Doing a little celebrating"

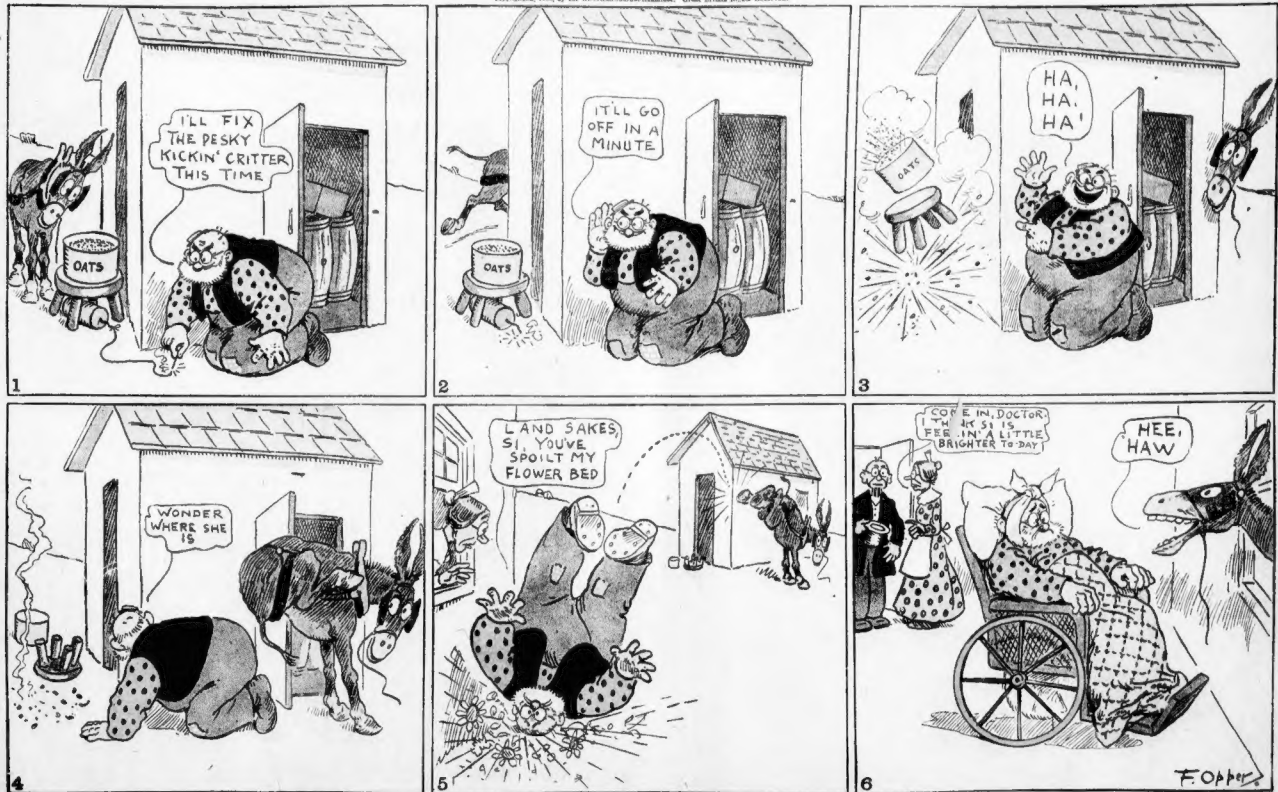

And SAM Laughed!
